

DEPARTMENT OF COMPUTER SCIENCE AND ENGINEERING

COMPUTER SCIENCE

MSC

MODULE –

CME728_SEMANTIC WEB_1

Final Project

Faculty Department

Submitted to

Assist. Prof. Dr. Oğuzhan MENEMENCİOĞLU

MAIS ALHAMIDI	2128150042
----------------------	-------------------

SEM1, 2022/23

1. Find a domain that is proper for you.

The domain that I want to study is about my Faculty which is Computer Engineering and I want to make ontology about this domain, so I will try to make the relationship and the instance that I have in my domain that includes the subject and the professor and the course in this semester.

2. In your domain, find a dataset to transform.

I create datasets manually and give the information and the attributes and make that propriety by flowing explaining the text that I want to create the ontology.

3. Create a schema for your data.

By representing the class or subclass and others representing attributes, my data set has 19 columns.

Class (Faculty).

Courses : (the name of the Courses).

Department : (3deffrint department IT, CS, IS).

Professor: the name of the Professor includes 5 pressers.

Student (New_Student, Old_Student include 4 students).

Data Property : (Name, Code, Age, Course_Name, Semester, Student ID, Type).

Object Properties : (has_Boss , has_Professor , has_student , has_supervisor , Register , Register_By ,Teacher).

Individuals (5 professors,4 Students,5 courses,3 Departments).

I tried to convert my CSV using OpenRefine software to exper the schema or to transform to RDF and was to try creating in the wiki data about this data, so I made an account and already create one. Then I tried to find software where I can create my ontology.

Also, I will provide an XML file.

I) What to transform: The dataset and schema that I have identified and created.

II) How to transform: The tool or library that I will use to convert my data into an ontology is Protégé.

III) What was obtained from the transformation: The resulting ontology in RDF or OWL format. I provide a sample of my raw input file, the transformation processor used, and the RDF output file.

All Document will provide by googel Driv Link :

<https://drive.google.com/drive/folders/1YPi8Do9TwRIVsfT9YhL7d7BSOb8PXCn2?usp=sharing>

Objective Properties

The screenshot shows the Protege interface with the 'FacultyDepartment' ontology selected. The 'has_supervisor' property is highlighted in the 'Object properties' tab. The 'Object property hierarchy' on the left shows 'has_supervisor' as a sub-property of 'owl:topObjectProperty'. The 'Usage' panel on the right shows 'has_supervisor' is used in 6 instances, including 'has_supervisor Domain Department' and 'has_supervisor Range Professor'. The 'Characteristics' panel on the left shows 'has_supervisor' is not functional, inverse functional, transitive, symmetric, asymmetric, reflexive, or irreflexive. The 'Description' panel on the right shows 'has_supervisor' is equivalent to 'Department' and 'Professor'.

The screenshot shows the Protege interface with the 'FacultyDepartment' ontology selected. The 'Teach' property is highlighted in the 'Object properties' tab. The 'Object property hierarchy' on the left shows 'Teach' as a sub-property of 'owl:topObjectProperty'. The 'Usage' panel on the right shows 'Teach' is used in 20 instances, including 'Professor_1 Teach Course_1' through 'Professor_5 Teach Course_5'. The 'Characteristics' panel on the left shows 'Teach' is not functional, inverse functional, transitive, symmetric, asymmetric, reflexive, or irreflexive. The 'Description' panel on the right shows 'Teach' is inverse of 'Courses', has a domain of 'Professor', and a range of 'Courses'.
